PRISON HEAD OF PHILIPPINES IS PROUD OF WORK

Dr. Dade Gives Advice of Value to Officials in Honolulu

Dr. Walter H. Dade, who furnished many valuable plans and suggestions on the prison system in the Philippines, is in Honolulu on his way to Newport News in the transport Balfour from the Philippines where he is director for the United States government of the bureau of prisons.

The most thorough and up-to-the-minute prison system in the world is said to be in the Philippine islands and Dr. Dade has been a welcome guest while here of Sheriff Charles H. Rose and High Sheriff William P. Jarrett, who are especially interested and conversant in the matter of prisons since their recent trip to the States.

Today Dade is visiting with members of the public works commission. The western man went to the Philippines in 1893 as a surgeon in the army and has been there, more or less, ever since. His daughter, Anna, accompanies him East. He wears by the far-west islands but admits that Hawaii is a trifle cooler at certain times of the year.

In the United States Dade will attend the Mohawk conference in October, taking up the problems of the various dependent races in the United States and its territories. The maintenance of his stay in the States will be taken up with lectures upon the Philippine prison.

Take Pledge in Work. "For over 10 years our prisons have been the talk of the world; the pride of the islands and the first place to be visited by tourists, but it is only in recent years that this has become known so I am going to the United States to tell them all about it," says Dade.

"The Iwalek penal colony on the island of Palawan alone embraces 100,000 acres and there are innumerable smaller ones. We average about 6000 prisoners but have very little trouble with them."

Uniformity is the watchword of Philippine prison officials, according to the doctor, and the possible under government management. The salars in the village and provincial prisons were uniform. Identical to the jail in any other prison in the islands, at the same food, have the same quarters, duties and orders.

Dade's home is in Manila. He has been here several times. The prison lectures will be made particularly interesting with nearly a hundred beautifully colored slides which have been reproduced from pictures taken of the Philippine institutions by Dade.

SAYS COMMISSION FORM OF GOVERNMENT NOT NEW; EXISTED UNDER MONARCHY

"After studying over this so-called commission form of government I find that it is nothing new. Why, Hawaii had it under the monarchy. There is nothing in it for Hawaiians to object to," says Gabriel Kekuehika, the veteran politician.

He says that much of the opposition to the commission form of government for Honolulu is because the Hawaiian electorate does not realize that it is in reality a return to the simpler government which existed under the monarchy. "In the old days the heads of departments were appointed, and so they are under the commission plan," says Kekuehika. "If the Hawaiians realize that nothing new is being attempted, I am sure the prejudice against this idea for the city and county of Honolulu would die out."

SUBMARINE BREMEN NOT COMING FOR SOME TIME?

(Associated Press by Federal Wire) NORFOLK, Va., Aug. 4.—The Bremen, sister ship to the submarine Deutschland, will not be here for some time. Such is the inference to be drawn from a statement made last night by Heinrich Necker, captain of the tug Timmins, which took the Deutschland out to the Cape Wednesday night. Asked when the Bremen might be expected to arrive, Captain Necker said: "You can depend upon it that she is not coming very soon; otherwise the Timmins would not return to Baltimore immediately, as we propose doing."

GARMENT WORKERS SETTLE THEIR DISPUTE

(Associated Press by Federal Wire) NEW YORK, N. Y., Aug. 4.—The long strike of the garment workers has come to an end, having been settled by the efforts of the federal conciliators, recently appointed. The preferential strike was one of the chief sources of friction between the Government and the workers. A new instrument accurately records the steam pressure at all times during a vessel's voyage no matter of how long duration. Waste water is purified by a process employing colloidal clay and milk of lime that has been invented by a French scientist.

Finds Hawaiian Sworn to Silence on Heiau Sites

Thomas G. Thrum Encounters Only Instance of Kind in Long Experience

(Special Star-Bulletin Correspondence) WAILUKU, Maui, Aug. 3.—Thomas G. Thrum, the well known antiquary of Honolulu, returned home on Wednesday after two weeks spent in investigations in east Maui and in the Kula district. His work was interrupted with somewhat by illness but he gleaned considerable information of interest in spite of this. He failed, however, to find any heiaus of which he had not already a record. He visited a number of these ancient temples about Kaupo and Kipahulu, however, and added somewhat in matter of detail to what is already known about them, from observation and interviews with the older residents of the districts. In Kula Mr. Thrum also visited a number of heiau sites but most of them are in poor state. A singular experience Mr. Thrum relates in meeting a very old Hawaiian who evidently knew considerable concerning the location of some of the antiquarian structures for which Mr. Thrum was searching, but who insisted that the subject was absolutely taboo and that he had been sworn to secrecy by his father. This is the only instance of this kind, Mr. Thrum states, that he has ever encountered during his life-time of work along these lines.

Urges Historical Society. "I was much interested in the suggestion of W. O. Smith that a historical society be formed in Maui for the preservation of data of special interest to this island. Through the interest of the Rev. Mr. Lydgate and a number of others, Kaula has done some good work through its historical society, but Maui is a much richer field for this kind of work than is Kaula. I sincerely hope that some one will take the lead in organizing such a society for Maui."

RIO GRANDE RUNNING FULL AND GUARDSMEN PREPARE TO FIGHT FLOOD

(Associated Press by Federal Wire) BROWNSVILLE, Texas, Aug. 4.—Although they had their first pay as troops in their pockets, the guardsmen stationed along the Rio Grande have been too busy to spend much of it. They have been notified that the floods of the Rio Grande are coming, and they have been working overtime to get their camps in readiness to meet the emergency. The river is now almost bankful in the lower stretches, and steadily rising.

GOVERNMENT DROPS CHARGES AGAINST PANAMA OFFICIALS

(Associated Press by Federal Wire) NEW YORK, N. Y., Aug. 4.—The indictments against John Burke and John Braddon, charged with conspiring with Jacob Salas to defraud the government purchasing office in the Canal Zone, in the purchase of supplies for the zone workers, have been quashed in the United States district court here, on the motion of the government attorney. It was explained that the United States court recently nullified the conviction of Salas on the ground that it lacked jurisdiction in the case.

CAMPAIN FOR "OPEN SHOP" GAINS RECRUITS

(Associated Press by Federal Wire) SAN FRANCISCO, Cal., Aug. 4.—The General Contractors' Association yesterday joined the fight for the open shop. Unofficially it was asserted that a number of other allied organizations have taken a vote and will support the action of the association.

MORE CARRANZISTAS TO HELP IN VILLA HUNT

(Associated Press by Federal Wire) CITY OF CHIHUAHUA, Mexico, Aug. 4.—The de facto government has ordered additional troops to be dispatched as soon as possible to take up the pursuit of Gen. Villa. The men will leave within a few hours.

SAN PEDRO STEVEDORES RETURN TO WORK

(Associated Press by Federal Wire) SAN PEDRO, Cal., Aug. 4.—The dock workers who went out on strike June 1 returned to their jobs yesterday. There are several hundred of the men.

JAPAN CITY SWEEP BY HOT CONFLAGRATION

(Associated Press by Federal Wire) TOKIO, Japan, Aug. 4.—Two thousand houses were destroyed by a conflagration in Takodate, the second largest city in northern Japan.

A new instrument accurately records the steam pressure at all times during a vessel's voyage no matter of how long duration. Waste water is purified by a process employing colloidal clay and milk of lime that has been invented by a French scientist.

When Your Eyes Need Care Try Marine Eye Remedy

WIVES TAKE TO "ROUGHING IT" WHEN WAR DULLS SEASIDES

The shortage of men at the seaside resorts as a result of the call for militia doesn't reduce the travel to the camps in the northern woods, for women are going, too. "Roughing it" seems popularized by war times.

PUBLIC EXPENDITURES COMMITTEE TELLS OF NEED FOR BOND ISSUE

Report Presented to Supervisors Gives Information as to How Money Shall Go

A table showing the amounts pledged by the city towards various improvement projects, a synopsis of arguments for a municipal bond issue, a statement showing the amount of indebtedness incurred by the territory which is being paid off by the city and county and other interesting and important information is conveyed in the report of the finance committee of the supervisors to the board, submitted Wednesday night. It is published below for the benefit of those interested in municipal problems.

Your committee on finance and public expenditures, to whom was referred the subject of a bond issue to meet expenditures for public improvements, reports as follows:

The subject which calls for immediate consideration by the electorate are roads, sewers and water mains.

The insistent public demand for roads of the first quality, capable of standing up under the excessively heavy requirements of today's traffic, presents a situation which can not be met from ordinary revenue under the present taxation rate. The entire change in the nature of street traffic in the last ten years has rendered the water bound crushed rock type of road, which was quite up to date when put in, obsolete. Some of this construction in residence districts with gilded surface will render fair service for some years to come. On main thoroughfares this is not the case. The increase in loads and high rate of speed of motor driven trucks, together with occasional heavy loads on army trucks, which do not come under the narrow tire prohibition, presents a problem which can only be solved by concrete foundation, together with such refinement in surfacing as the owners, on whom 2-3 of the burden will fall under the frontage tax law, are willing, or are able to bear. The requirements of the residents of the county might be met by a gradual improvement of the roads. But that course would not meet the situation as it exists. The universal wish to meet the expected increase in tourist travel, so much desired by many classes in the community, will only be satisfied by an extreme effort in road construction which will cost a considerable sum of money. It is proposed, therefore, and the committee recommends, that there be submitted to the electorate the question of authorizing a bond issue to meet a part of the cost of new road construction. It is not proposed to abandon or relax in the slightest degree the enforcement of the frontage tax law. The road money desired is to enable the city and county to meet the share chargeable to it under the frontage law. In this connection it is to be remembered that the share of all exempt frontages, both land in the control of the territory and land owned and occupied by the federal government, fall upon the city and county.

The city and county's share in frontage proceedings now under way is as follows:

Manoa Improvement District	\$30,621.50
Lualaba Street	12,118.50

The report of the superintendent of the water works shows in detail upon what street new mains are imperatively desired. It is absolutely unobjectionable to raise money on a bond issue for this purpose. The water works produce a revenue in excess of running cost, and the whole outlay can be paid for from revenue.

Sewers

As to sewers it is quite fitting to put the cost in part on the coming generation. Sewers should not be considered as a matter of luxury, for which payment should be made for use. This matter should be treated from a public health standpoint. The cost is the price we pay, and we should cheerfully assume it, for preserving the exceptionally favorable health conditions with which nature has blessed Hawaii.

Parks

A suggestion is made of a loan of \$100,000, for parks and playgrounds. The opportunity has been presented of purchasing two most essential playgrounds, viz the playground on Nuanu street at the corner of Pauoa road, and Atkinson Park at Kalaheo, on Pauoa Park. \$12,000.00 For Atkinson Park 34,320.00

Total \$46,320.00

The acquisition of the latter playground can not be too strongly urged.

RECORD OF GOOD ACCOMPLISHMENTS IS AGRICULTURAL STATION REPORT

Many Needs Recited Last Year Are Met and Efficient Work is Shown

Several needs of the United States agricultural station set forth in the fourteenth annual report, recently made public, have been met, according to the sixteenth annual report, for the year ending June 30, 1916, made public today.

Pathologist is Secured.

Request of the station for the services of a plant pathologist was complied with June 1, when C. W. Carpenter was assigned to duty here from Washington. In his report, incorporated in the report of the station, he says that he has observed and done some work toward the elimination of late blight in the Irish potato and celery, taro, pineapple and banana wilt and various other diseases which are not conspicuous simply because the crops which they attack are not being grown to any considerable extent on account of economic conditions prevailing in the islands. In a story published in the Star-Bulletin Monday Carpenter told of an attempt he is making to find some means of making Bordeaux, the cure for potato blight, stick on the plants during the rainy season.

Forage Experiments Started.

Setting aside of a tract at Schofield where the practicability of growing suitable grasses or other forage for army use can be determined, recommended in the fourteenth annual report, was made on June 10, according to the report just made public. The army brings hay from the mainland at great expense at present, despite the fact that there is available on the reservation probably sufficient land to grow all the roughage required. Thirteen acres has been set aside by the commanding officer of the Hawaiian Department, the report says, for the use of the station as an experimental tract upon which to develop the best methods of growing forage for the army horses and mules. Preliminary plantings by the army in co-operation with the station have already been made on nine acres of the tract. Ten acres are to be used and the other three set aside for sub-station buildings. Details of the plans of the station were given by the Star-Bulletin when Dr. A. S. Hitchcock arrived here to study the forage problem about six weeks ago.

Will Have Fair Exhibits.

A collection of native and introduced specimens of grasses and legumes, as well as economic fungi has been started recently by the station, the report says. "Much of the preserved material will be available for exhibition at the local agricultural fairs, which constitute a new enterprise in which the station is very much interested," it continues.

Chemist's Work Important.

Investigation which it is hoped will lead to the discovery of the native home of the algaroba is being conducted, the report says. The work of M. O. Johnson, as chemist at the station, on the yellowing of pineapples grown on manganese soil is reviewed and various other studies of pineapple diseases spoken of.

Reports of the horticultural, chemical, plant disease, agronomy and extension divisions and of the territorial market and Glenwood sub-station are incorporated in the general report, which is on its way to Washington, where it will be printed for public distribution.

Decide Events for Boy Scout Trophy Contest

Scoutmasters G. C. Potter and Rolla K. Thomas of Troops I and VI, who compose the committee in charge of the contests for the Duncan Boy Scout cup, which will be awarded to the troop having the largest number of points in the scouting competition at the Kailua camp September 4-9, met yesterday afternoon at the Y. M. C. A. and decided upon the events in the competition for the big cup offered by Mr. Duncan.

Special effort was made upon the part of the committee in charge to procure events that were related to scouting and which could be suitable for tenderfoot, second class and first class scouts. The events that were decided upon will probably be the scout pace, signaling test, first aid, water boiling, judging of weights and distances, tracking or Kim's game.

It is thought that the scoring will be the same as last year when each event was divided into points, the number 100 to each event. Although definite rules were not laid down at the meeting yesterday, it is thought that the competition in the scout pace will be made by four representatives from each troop. Signaling will be done by four representatives, two receivers and two senders. In the water boiling contest representatives will be chosen from each troop by the scoutmasters, two to be selected from each troop. Four scouts will make up each troop complement in the first aid demonstration and in the other events the members of the troop are ordered to report at 7 o'clock.

The object of the meeting is to lay preliminary plans for the coming camp at Kailua and also to plan for the scout work of the coming year.

Russian railroads protect ties and telegraph poles against decay by soaking them for several months before use in strong brine.

BRITISH SEA LORD SAYS BATTLE-TIDE NOW WITH ALLIES

Balfour Declares Jutland Fight Was Turning Point of Great War

(Associated Press by Federal Wire) LONDON, Eng., August 4.—Arthur J. Balfour, first lord of the admiralty, issued a formal statement to the nation through the press last night in which he declared that the tide had now definitely turned in favor of the Allies, and that the turning point was the naval battle off the coast of Jutland. He pointed out that since the great sea fight the Allies had reported a series of successes, of greater or lesser importance, on practically every battlefield.

He quoted the statements of diplomats from Entente countries as supporting his opinion that the war wave was receding rapidly, and that the Allies had met the full strength of the Teutonic foe and matched it with their own successfully.

Tide of War Favorable.

"The tide of war has begun to flow strongly in our favor," says the first lord's statement. "It began to flow for us and against the enemy immediately after the battle of Jutland. As always, the sea power has proved the deciding factor in war. This was true in spite of the efforts on the part of our foes to seize the name of victory since they could not have the substance. They are back in their ports and they are back there, we have every reason to believe, so badly shattered that it will be impossible for them to assume an important role in naval warfare again. But the chief thing is that the German warships are in port and not at sea, while our ships continue to dominate the seas of the world. Nowhere does the German flag fly, save in some Teutonic or neutral port.

Allied Successes Continue.

"That this has meant much to the cause of the Allies is to be seen by the most casual review of the war since that battle in the mists off the Skagerrak. Every week since the German fleet was driven, damaged, back to the port from which it had started out so proudly, but in short time before there has been news of a great Allied success, in one or another part of the field of war."

MAUI'S FISHING IS BOOSTED BY FIELD BOOKLET

"Fishing has been punk so far this season, but why should I worry? It will soon be time to return to the best fishing ground in the world. See?" [Extract from letter of J. W. Jump, the renowned game fisherman, writing from Los Angeles to H. Gooding Field, Mr. Jump is expected within the next few weeks at the head of a party of southern California fishermen.]

Maui comes in for a very generous share of attention in the new folder "Game Fishing in Hawaiian Waters"—just published by the Hawaii Promotion Committee. The pamphlet is written by H. Gooding Field, father of the Hawaii Tuna Club, and is elaborately illustrated with photographic reproductions of specimens of the Hawaiian game fishes taken by rod and reel during the past five or six months. Each of the more important varieties is briefly described. A paragraph in the booklet advises that a club house and hotel accommodations have been provided at Kihali, Maui, for the convenience of anglers, and that this point is adjacent to the famous Molokini fishing grounds, probably the best in the territory.

a period of summer vacation, will be held this evening at their headquarters at the Japanese Y. M. C. A. The members of the troop are ordered to report at 7 o'clock.

The object of the meeting is to lay preliminary plans for the coming camp at Kailua and also to plan for the scout work of the coming year.

It is in a thickly settled district, and one which, aside from this piece of ground, is sadly deficient in sites or opportunity for wholesome recreation for the children of the district. The strongest appeal in the interest of civic improvement is made by the situation in this portion of the town.

The remainder of the \$100,000 it is proposed to use in improvements at the public baths at Kapiolani Park. The excavation of a small pool, deep enough for diving, would add greatly to the attractiveness of this fine bathing beach which has justified its cost many times over, and is being taken advantage of by increasingly large numbers daily.

In all there is required for country roads in this county \$595,500, and for city and county share improvement within the district of Honolulu:

Roads	\$400,000
Water Mains	125,000
Sewers	125,000
Parks	105,000
Total	\$750,000

CHAIRMAN.

ITALIAN LINER SENT TO BOTTOM WITHOUT WARNING

LONDON, Eng., August 4.—The submarine warfare has been reopened with the torpedoing of the Italian liner Letimbro, carrying a crew of fifty-seven and 113 passengers.

The Reuter News Agency has received word of the arrival at Syracuse of two boatloads of survivors, and twenty-eight others have reached Malta, exhausted by their long experience in open boats. There were men, women and children on board the Letimbro when she was attacked and sent to the bottom.

Last night Lloyds reported four more neutral victims of Teuton submarines. There were two Swedish vessels, the Bror Oscar and the Vermeland. Norway lost one ship, the John Wilson, and the Danes lost one, the Katholm, submarine in the Mediterranean.

TEUTON GAS ATTACKS AGAINST SLAVS FAIL

LONDON, Eng., Aug. 4.—An official despatch from Petrograd says that on the night of the second of August the Germans launched a series of six gas attacks against the Slav lines in the region of Smorensk. The gas came down both sides of the railroad, but was discovered in time, and the German infantry following to the attack, were met with a concentrated fire from the Russian infantry and machine guns that drove them back to their own lines, after suffering severe losses.
